

STAN OLIVIER

Game Development Student - Gameplay Programmer & Tools Programmer

stan.olivier@student.howest.be | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

[Staden, België] | [+32 468 19 25 90]

PROFILE

Second-year Game Development student with a versatile technical toolkit, experienced in collaborative team projects. Enjoys solving complex problems and picking up new engine workflows quickly, with hands-on experience across Unity, Unreal Engine, and custom C++ tooling.

SKILLS

Languages	C++, C#, Python, Lua, SQL
Engines / Tools	Unity, Unreal Engine, CMake, Houdini
Other	Gameplay systems design, tool development, version control, cross-engine workflows

SELECTED PROJECTS

Minigin Engine

- [A component-based game engine written in C++, featuring a recreation of the classic arcade game Pengo.]

Utility Theory Research

- [A dedicated Game AI research focused on the practical applications of Utility Theory in real-time simulations.]

Beep and Bumper

- [Team project built in Unity as part of the DAE curriculum. My main contribution to the project was creating the character gameplay elements. I also served as the teams troubleshooter handling all sorts of problems.]

See full write-ups, trailers, and playable builds on the [portfolio site](#).

EDUCATION

Bachelor in Game Development (Programming) - Digital Arts and Entertainment (DAE), Howest

[Currently in 2nd year — "2024 – present"]

ADDITIONAL INFORMATION

- Spoken languages: Dutch (native), English (fluent)
